Conditionnement : 60 gélules de 533 mg

Description

Porphyra umbilicalis, known as *Nori* in Europe, is the most widely consumed edible seaweed in the world.

Lithothamnium is a seaweed rich in minerals and trace elements, including magnesium, and plays a key role in maintaining nervous system balance. In cases of prolonged stress, it helps to limit negative effects on health.

Klamath Algae, one of the earliest bacterial life forms to appear on Earth, is harvested at a depth of 1,300 meters in Klamath Lake (Oregon, USA). It contains over a hundred micronutrients (vitamins, minerals, trace elements, amino acids, proteins, etc.) and also phenylethylamine (known as the "pleasure molecule"), which disappears under stress.

Rhodiola rosea, a plant that grows in cold climates at altitudes over 2,000 meters, is an adaptogenic plant. It has been used for centuries to combat Siberian cold and environmental stress.

It helps the body adapt to emotional and physical stress and stimulates the nervous system.

It has beneficial effects in cases of fatigue and stress-induced headaches, supports cardiovascular health, and helps protect against hypertension.

Borage Oil, an essential fatty acid, is a source of G.L.A. (Gamma Linolenic Acid). G.L.A. from Borage Oil is directly absorbed by the body.

PROTEOBIO helps the body adapt to emotional and physical stress and stimulates the nervous system by influencing mood.

Only for mainland France.

In the case of a single purchase of one pack or a discounted product, a contribution to shipping and packaging costs is always required.
